notebook.maksadannamuradov.com

Looking for an entry-level position as a Software Engineer in a dynamic company that values my analytical and technical skills and provides scope for updating my knowledge.

## **EXPERIENCE**

#### **SNOW COLLEGE**

## **IT Department Software Intern**

05/2021 to current

Interned at the IT department creating different websites for college such as Kubernetes Monitoring Dashboard, and IVC Dashboard, Academic Appeals Dashboard.

### **Web Telemetry and Operations**

01/2022 to current

Helped students in web telemetry about how to collect telemetry about apps deployed to web and also learned about how to use those logs to understand business logic.

## **EDUCATION**

Snow College Ephraim, UT

Bachelor of Software Engineering:

Expected 05/2022

Emphasis in Web Development and Data Science: GPA: 3.90

#### **SKILLS**

Programming Skills:
Web Development:
Django, React.js, Vue.js, Node.js, HTML, CSS, .Net Core
Technical Skills:
Software Development:
Cloud Development:
DevOps:
Personal Skills:
C++, C#, JavaScript, Python, Kotlin, Xamarin.Forms
Django, React.js, Vue.js, Node.js, HTML, CSS, .Net Core
Git, Linux, PgSQL, MySQL, Mongo, Docker, Cloud
Agile/Scrum, TDD, DDD, Software Maintenance
Azure, Azure web services, AWS, AWS lambda, ECC
Kubernetes, Terraform, Web Telemetry, GitHub Actions
Teamwork, Communication, Leadership, Analytical

## **PROJECTS**

- **Kubernetes Monitoring Dashboard**: I worked on creating monitoring dashboard using logs coming from Kubernetes cluster which had ELK Stack enabled for logging. I mainly worked on writing queries to get logs from Elastic Search using TypeScript and Vue.js.
- **IVC Dashboard**: I worked in a group building admin and student dashboards displaying recordings coming from Nginx and Next Cloud servers. We build the dashboard using TypeScript and Vue.js.
- Risk Game: I created a visualization engine and logging instructions for a .NET controller. I assisted a team with overall project design, logic and API architecture. As a team we developed a multi-player Risk game using REST APIs and multiple distributed clients on Docker container.
- Wireguard Admin: I worked on personal project to create Wireguard VPN admin and client hosted on Linode VM. While building this application, followed good security practices and skills in order to defend against malware attacks and security breaches.
